INDICATION
PROVENGE® (sipuleucel-T) is a prescription medicine that is used to treat certain patients with advanced prostate cancer. PROVENGE is made from your own immune cells.

IMPORTANT SAFETY INFORMATION
• Before getting PROVENGE, tell your doctor about all your medical problems, including problems with your heart or lungs, or if you have had a stroke
• Tell your doctor about all the medicines you take, including prescription and nonprescription drugs, vitamins, and dietary supplements

Please see inside front cover for additional Important Safety Information and enclosed full Prescribing Information.
INDICATION

PROVENGE® (sipuleucel-T) is a prescription medicine that is used to treat certain patients with advanced prostate cancer. PROVENGE is made from your own immune cells.

IMPORTANT SAFETY INFORMATION

• Before getting PROVENGE, tell your doctor about all your medical problems, including problems with your heart or lungs, or if you have had a stroke

• Tell your doctor about all the medicines you take, including prescription and nonprescription drugs, vitamins, and dietary supplements

• PROVENGE is made from your own immune cells, collected approximately 3 days before each scheduled infusion of PROVENGE. The collection is called “leukapheresis” (pronounced loo-kuh-fuh-REE-sis). You will get PROVENGE in 3 intravenous infusions (put into your veins), about 2 weeks apart. Each infusion takes about 60 minutes. You will then be monitored for at least 30 minutes. Your doctor will give you a schedule for your cell collection and infusion appointments. It is very important that you arrive on time for your appointments

• The most common side effects of PROVENGE include chills, fatigue, fever, back pain, nausea, joint ache, and headache. These are not all the possible side effects of PROVENGE treatment

• PROVENGE infusion can cause serious reactions. Tell your doctor right away if you:
  – Have breathing problems, chest pains, racing heart or irregular heartbeats, high or low blood pressure, dizziness, fainting, nausea, or vomiting after getting PROVENGE. Any of these may be signs of heart or lung problems
  – Develop numbness or weakness on one side of the body, decreased vision in one eye, or difficulty speaking. Any of these may be signs of a stroke
  – Develop symptoms of thrombosis which may include: pain and/or swelling of an arm or leg with warmth over the affected area, discoloration of an arm or leg, unexplained shortness of breath, chest pain that worsens on deep breathing
  – Get a fever over 100°F, or redness or pain at the infusion or collections sites. Any of these may be signs of infection

• Tell your doctor about any side effect that concerns you or does not go away. For more information, talk with your doctor

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

Please see enclosed full Prescribing Information.

WHAT IS PROVENGE?

PROVENGE is the first and only FDA-approved immunotherapy for advanced prostate cancer

PROVENGE is an immunotherapy and the only personalized treatment that is clinically proven to help extend life in certain men with advanced prostate cancer. PROVENGE immunotherapy takes your own immune cells and reprograms them to attack your advanced prostate cancer. This process delivers a treatment designed just for you.

PROVENGE has proven results as an advanced prostate cancer immunotherapy

In the clinical study that supported FDA approval, more men treated with PROVENGE lived longer than men not treated with PROVENGE.

- Median survival was 4.1 months longer for men treated with PROVENGE (25.8 months) than for men who were not (21.7 months)*
  - PROVENGE reduced the risk of death by 22.5% for patients in the PROVENGE group
- More men in the PROVENGE group (nearly 38% more) were alive 3 years after the start of the study than men not treated with PROVENGE*
- 1.5% of men discontinued treatment with PROVENGE due to side effects

*Individual results may vary.
Overall survival benefit for PROVENG E

IMPORTANT SAFETY INFORMATION (cont.)

- The most common side effects of PROVENG E include chills, fatigue, fever, back pain, nausea, joint ache, and headache. These are not all the possible side effects of PROVENG E treatment.

Please see inside front cover for additional Important Safety Information and enclosed full Prescribing Information.
HOW DOES PROVENCE THERAPY WORK?

PROVENCE is an immunotherapy that is designed to reprogram your body’s immune cells to attack advanced prostate cancer cells. By jumpstarting immune cells already in your body, PROVENCE therapy helps you personalize your fight against advanced prostate cancer.

Important information about PROVENCE and PSA levels

The prostate-specific antigen (PSA) test is often used to monitor progression of prostate cancer and how effectively your treatment is controlling the disease. However, in the PROVENCE clinical study, the main goal was not to lower PSA levels—it was to extend life. So even if your PSA levels do not go down, PROVENCE may help you live longer.

Therefore, if your PSA levels don’t change, it is not indicative of how well your PROVENCE treatment may be working. Be sure to talk to your doctor if you have any questions or concerns about your PSA levels.

Please see inside front cover for additional Important Safety Information and enclosed full Prescribing Information.
PROVENGE is a personalized treatment process that collects and reprograms your body’s own immune cells. Other benefits of PROVENGE are:

**PROVENGE has been proven to help men live longer**

3 years after the start of a clinical study, more men treated with PROVENGE were alive than men not treated with PROVENGE*

- Median survival was 4.1 months longer for men treated with PROVENGE (25.8 months) than for men who were not (21.7 months)

**Most side effects of PROVENGE were generally mild to moderate**

The most common side effects in clinical studies were chills, fatigue, fever, back pain, nausea, joint ache, and headache. Please see Important Safety Information inside front cover

**PROVENGE has a short treatment course**

Therapy can be completed in about a month with 6 appointments

*Individual results may vary.

**IMPORTANT SAFETY INFORMATION (cont.)**

- PROVENGE infusion can cause serious reactions. Tell your doctor right away if you:
  - Have breathing problems, chest pains, racing heart or irregular heartbeats, high or low blood pressure, dizziness, fainting, nausea, or vomiting after getting PROVENGE. Any of these may be signs of heart or lung problems
  - Develop numbness or weakness on one side of the body, decreased vision in one eye, or difficulty speaking. Any of these may be signs of a stroke
  - Develop symptoms of thrombosis which may include: pain and/or swelling of an arm or leg with warmth over the affected area, discoloration of an arm or leg, unexplained shortness of breath, chest pain that worsens on deep breathing
  - Get a fever over 100°F, or redness or pain at the infusion or collections sites. Any of these may be signs of infection
PROVENGE SIDE EFFECTS TO CONSIDER

There are potential risks associated with PROVENGE:

- In controlled clinical trials, 71.2% of patients in the PROVENGE group developed an acute infusion reaction.

- The most common events in clinical trials (≥ 20%) were chills, fever, and fatigue. In 95.1% of patients reporting acute infusion reactions, the reactions were mild or moderate. Fevers and chills generally resolved within 2 days (71.9% and 89%, respectively).

- 1.5% of men discontinued their treatment with PROVENGE due to side effects.

The most common side effects include:

- Chills
- Back pain
- Joint ache
- Fatigue
- Nausea
- Headache
- Fever

In clinical studies, some men experienced more serious side effects:

- Chest pain
- Racing heartbeat
- Irregular heartbeat
- Dizziness
- Nausea
- Vomiting
- Stroke
- Thrombosis

These are not all the possible side effects of PROVENGE treatment. For more information, talk with your doctor.

Please see inside front cover for Important Safety Information.
IS PROVENGЕ RIGHT FOR YOU?

PROVENGЕ is a treatment option for certain men with metastatic castrate-resistant prostate cancer

You may be able to receive PROVENGЕ therapy if:

- You are on hormone therapy and have rising PSA levels
- Your cancer has spread from the prostate to other places, such as your bones
- You are not taking narcotics for cancer-related pain

Ask your doctor if PROVENGЕ is right for you.
WHEN IS THE RIGHT TIME FOR PROVENGE?

Since PROVENGE is an immunotherapy that boosts your immune system, it should be used early on in your advanced prostate cancer treatment plan.

In fact, the National Comprehensive Cancer Network (NCCN) guidelines recommend using PROVENGE first, as it is the only immunotherapy treatment option for men with advanced prostate cancer with few or no cancer-related symptoms. PROVENGE boosts your immune system to help it fight your advanced prostate cancer.

After your PROVENGE treatment, other options such as radiotherapy, hormone therapy, and chemotherapy, may still be available to you.

A possible prostate cancer treatment path*

* This graphic represents one possible path and will not apply to all patients.
† Castrate-resistant prostate cancer.
Abridged version adapted from the NCCN Guidelines V2. 2017.
IMPORTANT SAFETY INFORMATION (cont.)

• Before getting PROVENG, tell your doctor about all your medical problems, including problems with your heart or lungs, or if you have had a stroke
• Tell your doctor about all the medicines you take, including prescription and nonprescription drugs, vitamins, and dietary supplements
More than 90% of Medicare fee-for-service (FFS) patients receiving PROVENCE are expected to have minimal to no out-of-pocket costs*

There are many types of insurance, so be sure to speak with your doctor’s office to help you throughout the financial process. You can also get more information about your coverage, as well as whether you are eligible for additional financial support during treatment with PROVENCE, by calling 1-877-336-3736.

*Data from Dendreon ON Call benefit verifications from January 1, 2016, to August 31, 2016. These data represent the distribution of patient out-of-pocket costs, per infusion, and do not include patient assistance funding. Your insurance coverage will be dependent upon several factors such as where you live and your health plan’s insurance benefit design. Please contact 1-877-336-3736 or your plan administrator for more information.

PROVENCE is covered by Medicare as well as most other commercial plans. Learn more about PROVENCE coverage at www.PROVENCE.com.

Please see inside front cover for Important Safety Information and enclosed full Prescribing Information.
We want to make sure help is available for patients who need financial assistance.

**Financial support programs include:**

**Co-pay assistance**
- Eligibility is determined by Dendreon
- Refers Medicare patients to the appropriate independent foundation that may provide financial assistance for co-pays, co-insurance, and deductible costs
  - Eligibility is determined by the individual foundation
- Commercially insured patients may be eligible to access PROvide™, which provides coverage of up to $6,000 for PROVENGE treatments

**Support for uninsured or rendered uninsured patients**
- Eligibility criteria are determined by Dendreon
- PROVENGE is provided free of cost to eligible uninsured patients and those eligible patients who have become uninsured due to a final payer claim denial.
  - Requirements include:
    - Adjusted gross income of $150K a year or less
    - Age 18 or older
    - US resident
    - On-label prescription

**Travel cost assistance**
- If a patient needs financial assistance with treatment-related costs, a case manager can refer him to independent resources to determine if he is eligible for help with these costs

---

1. Government-funded programs, for example, Medicare, Medicare Part D, Medicaid, or TRICARE. In the event an eligible patient’s claim for coverage of PROVENGE is denied by his payer after all appeals, the cost of the drug may be covered by Dendreon’s patient assistance program. Co-pay and travel assistance foundations provide assistance regardless of the choice of medicine, and decisions are based on financial need and according to criteria established by the individual foundations. Dendreon can assist patients by referring them to these independent organizations. Dendreon cannot guarantee that patients will be eligible for or receive assistance after referral. Dendreon does not have control or managerial influence over these independent organizations.

2. The PROvide™ Commercial Co-pay Program provides flexible coverage of up to $6,000 over 3 PROVENGE treatments for co-pays, co-insurance, and deductible costs. Eligibility criteria can be changed or program can be discontinued at any time at the sole discretion of Dendreon. Patients with government-funded insurance including Medicare, Medicare Part D, Medicaid, or TRICARE are not eligible for the PROvide™ Program. Additional terms and conditions apply.

3. Contact Dendreon ON Call at 1-877-336-3736 for eligibility criteria. Uninsured patient assistance program eligibility criteria can be changed or program can be discontinued at any time at the sole discretion of Dendreon.

4. In the event an eligible patient’s claim for coverage of PROVENGE is denied by his payer after all appeals, the cost of the drug may be covered by Dendreon’s patient assistance program.
When you and your doctor have decided that PROVENGE is right for you, your doctor’s office will help you fill out the necessary enrollment forms. With PROVENGE you can personalize your fight against advanced prostate cancer. Your doctor’s office will also help you set your PROVENGE treatment schedule. Once your treatment schedule has been set, you will receive your complimentary Patient Comfort Kit, which will support you during your PROVENGE treatment appointments.

At this point you can also begin applying for the various types of financial support services available to you. Please refer to pages 12 and 13, or visit www.PROVENGE.com, to learn more about our financial support services.

Your comfort kit provides items to help support you during PROVENGE therapy.
YOUR PROVENGE TREATMENT PROCESS

Each dose of the PROVENGE treatment process is personalized by taking your own blood cells and reprogramming them to jumpstart your immune system. Here’s a step-by-step overview of the process:

**Step 1: Cell collection**
To make each dose, blood will be drawn from your body and passed through a machine that collects a small portion of your immune cells, along with some platelets and a small number of red blood cells. The machine returns the rest of the cells and blood to your body.
- This cell collection process is called leukapheresis and takes 3 to 4 hours.
- Your cell collection will take place at a blood center with staff that have been trained to perform the procedure.

**Step 2: PROVENGE treatment**
Your immune cells are then sent to an FDA-approved manufacturing facility to be made into a dose of PROVENGE specifically for you.
- Each dose of PROVENGE is given about 3 days after your cell collection procedure, and your appointment will take about 2 hours.

After 6 appointments, your treatment with PROVENGE is complete.

**IMPORTANT SAFETY INFORMATION (cont.)**
- PROVENGE is made from your own immune cells, collected approximately 3 days before each scheduled infusion of PROVENGE. The collection is called “leukapheresis” (pronounced loo-kuh-fuh-REE-sis). You will get PROVENGE in 3 intravenous infusions (put into your veins), about 2 weeks apart. Each infusion takes about 60 minutes. You will then be monitored for at least 30 minutes. Your doctor will give you a schedule for your cell collection and infusion appointments. It is very important that you arrive on time for your appointments.
The Patient Comfort Kit you receive after your treatment schedule has been set is intended to support you and help you pass the time during your appointments. Your Comfort Kit includes a backpack, diary, support kit, water bottle and dissolvable electrolyte packets, stretch cap, and hand exercisers. We recommend bringing these items to your PROVENGE treatment sessions.

Before your cell collection procedure, you should:

- Make sure to drink more water than usual 2 to 3 days before your appointment to stay well hydrated
- Avoid drinking caffeinated beverages on the day of each cell collection procedure
- Eat a calcium-rich breakfast, which may include yogurt, milk, calcium-fortified orange juice or cereal, bananas, blueberries, or almonds
- Wear comfortable, loose-fitting clothing, especially clothing with sleeves that can be raised above the elbow
- Have a driver lined up for the ride home since most people feel fatigued after the cell collection procedure

Please see inside front cover for Important Safety Information and enclosed full Prescribing Information.
As this sample schedule shows, your time commitment for PROVENGE is 6 appointments over about a month. It is important for you to follow up with your doctor for other treatments and appointments.

IT’S IMPORTANT THAT YOU KEEP YOUR SCHEDULED APPOINTMENTS

Since your personal dose of PROVENGE has a short shelf life, if you miss an infusion appointment, your personal dose of PROVENGE will expire and can no longer be used. It’s crucial that you maintain your treatment schedule.

We encourage you to use the diary in your Patient Comfort Kit to set reminders for yourself. You can also ask family members or friends to mark your procedure dates on their calendars too, to help ensure that you do not miss any appointments.

“I wanted to be strong and fight the cancer. Everything I read about PROVENGE had said you’re fighting it with your own immune system.”

Todd
PROVENGE patient

IMPORTANT SAFETY INFORMATION (cont.)

- Before getting PROVENGE, tell your doctor about all your medical problems, including problems with your heart or lungs, or if you have had a stroke
- Tell your doctor about all the medicines you take, including prescription and nonprescription drugs, vitamins, and dietary supplements

Please see inside front cover for additional Important Safety Information and enclosed full Prescribing Information.
